Paysafecash shop module

Installation
guide

Paysafecash Prestashop

2-step browser upload installation guide

General prerequisites

1 Paysafecash integration data

You need the API access data for the Paysafecash Productive System (API key) to successfully connect to our payment service.

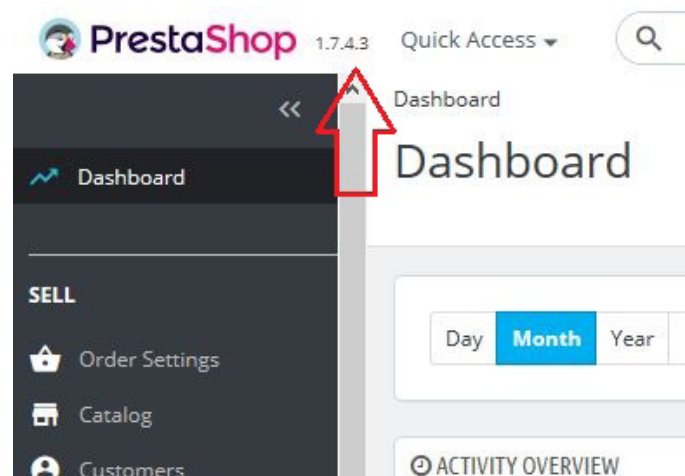

This will be sent to you by email from the Paysafecash Integration Team (integration@paysafecard.com) as soon as all the contractual steps have been completed.

2 Compatible shop system version

Following Prestashop shop system versions are compatible with this Paysafecash module.

- 1.6.X
- 1.7.X – 1.7.6

You can find the currently running version of your Prestashop shop system in the logged in area of your back office.

Prestashop - Installation guide

3 Paysafecash module as .zip file

The module ZIP file can be downloaded from the Paysafecash webpage.

<https://www.paysafecash.com/en/business/downloads/>

- **Preparation of the zip file for the upload / installation**

After the download of the Paysafecash module, you will receive a file called “paysafecash-prestashop_1.6-1.7.6-v2.0-master.zip”, please unzip this file
Open the folder “paysafecash-prestashop_1.6-1.7.6-v2.0-master” until you find the folder “paysafecash”

	paysafecash	21.01.2021 23:29	File folder
	.gitignore	21.01.2021 23:29	GITIGNORE File
	README.md	21.01.2021 23:29	MD File

Please zip the folder “paysafecash” you will have a file paysafecash.zip

Module installation

The Paysafecash module can be loaded and installed as follows using the Prestashop back office.

Please be aware that the location to upload a module differs from version to version.

1. Go to the menu point “module”
2. On the top right press the button “Add a new module”
3. Now you can choose the file, we have prepared before
4. Choose the file “Paysafecash.zip” and click the button “Upload this module”

ADD A NEW MODULE

 The module must either be a Zip file (.zip) or a tarball file (.tar, .tar.gz, .tgz).

Module file

Choose a file

 Upload this module

	paysafecash	23.01.2020 16:42	File folder	
	paysafecash.zip	10.02.2020 14:01	Compressed (zipp...	345 KB

After successful upload you can find the module in the Modules List of your back-office.

Module configuration

To enable the Paysafecash payment method for your web-shop, please follow these configuration steps.

Search for the Paysafecash module in your modules list and click the button “Configure”

Following picture shows how the Paysafecash configuration page looks like:

Please find here a description of how to configure each field

- **Mandatory fields**

Test mode: In case you want to connect to the test system, please click here on the “YES” button. Otherwise, please click on the “NO” button. This deactivates the test system.

ATTENTION: A dedicated API key generated for you is required for the live system.

API key: this key will be provided by the Paysafecash Support Team via a ZIP file in a separate email. Please copy this API key and insert it into the “API Key” field.

ATTENTION: The provided API key is only usable for the live system.

Webhook key: this key is also provided by the Paysafecash support team via ZIP file. Please copy the content of the Webhook Key and paste it into the field “Webhook RSA Key”.

ATTENTION: Only the key itself needs to be copied, as shown in the image below. (Do not copy the “BEGIN” and “END” text)

```
-----BEGIN RSA PUBLIC KEY-----

Prestashop - Installation guide

- **Optional fields**

Submerchant ID: If you operate several online shops and they run under an account/company name, you can differentiate these web shops via the Submerchant ID.

ATTENTION: You specify this value, but it must be coordinated with paysafecard.

Please inform your account manager if you would like to use this option. If this value is sent without coordination, it will lead to unsuccessful transactions.

Customer Data Takeover: This field enables the possibility to transfer the customer registration data to the Paysafecash payment panel, during payment creation. This solely makes the registration at the Paysafecash payment panel easier for the customer.

Variable Transaction Timeout: This field configures the time between the creation of the barcode and the expiration of the barcode. The time span is specified in minutes. Minimum: 1 day - Maximum: 14 days.

ATTENTION: If no value is entered, the bar code and thus the transaction expires after 3 days by default.

Debug mode: Please only activate this checkbox in case error analyses are needed. In activated mode log-files are being written, which can be found under: Menu point configuration and sub menu point log-files.

Next steps

After you have completed the configuration steps, please contact the Paysafecash Support Team. We will then make a test payment for you on the live system to ensure a successful integration with Paysafecash.
